

Brushcutting

We offer a full line of On and Off-Track Brushcutting services. Our off-track capabilities include brush removal and grade crossing clearing. Our on-track units carry a pushcart equipped with a hose making machine, welder, torch, tools, and a variety of spare parts, which reduce down-time to a minimum. Railway Equipment Services is proud to be one of the only contractors in the country with a fleet of multiple on-track machines. Up to three units can be operated simultaneously in order to make the most of limited track time. By operating in this manner, our customers recognize huge savings and reduced time on the job. Rate quotes are available by phone or e-mail. Each job will have specific needs and those needs may vary. Hourly rates are available. Please contact, fax, or e-mail us at info@railway equipmentservices.net for more information on our brushcutting services.
